The Microsoft mouse was the most comfortable for my hand since it was the biggest out of the 4. I found that most of my hand was able to grasp the mouse and the only parts of the hand that wasn't able to grip the mouse was in the pinky region specifically D2 and D3. I also liked there was an indentation on the left side of the mouse which allows your thumb to get a better grip.

The Lenovo mouse was the second most comfortable. In the paint print, we can see that there was not much paint in the regions of C1, C2, C3, D2 and D3. When grasping the mouse, I could feel that there was not much for my pinky and ring finger to grip.

The AmazonBasics mouse was the third most comfortable. It was very difficult for me to fully grip the mouse with the right half of my hand and you can see this because the C and D regions have little to no paint.

The Apple mouse was the least comfortable and I found that the mouse was kind of small for my hand. From the hand print we can see that the majority of the regions were painted but that was due to the size of the mouse and the fact that I had to move up my hand and almost claw it to get a full grip on it. There wasn't much support by the palm of my hands.
